Pioche Weekly Record.

Official Paper of Lincoln Co.

Growth of Electric Traction The growth of electric traction in this country is one of the most marvelous street railway journal draws attention to the fact that in the past five years the mileage of street railways operated by electricity has increased from 100 at 100 electricity has increased from 50 miles to over 6,000 miles, which is a greater mile-age than that of all the other street railways in the country operated by both animal and other forms of motive power. Of this large total nearly one-third was built in 1892. No estimate has yet been given of the aggregate increase in value n suburban property that has been im-proved by the running of new electric ines, but the amount must be enormous, as a large proportion of late installations have been in suburban districts, partic-

ularly in the east. In July, 1800, the street railway mileage of the country was 8,650 miles. At the present time it reaches a total of 11,655 miles, or an increase of 3,000 miles in the past 24 years, During 1892 there was an additional increase of 1,066 miles. Some additional increase of 1,066 miles. Some of these lines have been introduced in the most crowded parts of large cities, where it is admitted that cable traction would be more economical. The reason would be more economical. The reason for this lies probably in the fact that it would be far less economical to change from electric to cable power simply for the short distance than to retain the system already in operation.

A New Flower.

Mary D. Welcome, the Yarmouth (Me.) florist, says the flower that will be most wondered at and admired among the new fashions Dame Nature has introed this year is the entirely new type of ginnias, called the "crested and curled zinnias." They originated as a "sport" on the trial grounds of Henderson, among a multitude of varieties imported from curope with those of home growth. They als curiously twisted and curled, fter the style of some Japanese chrysannums and are so unlike the well known sennia no one would suppose them to belong to that plebeian family, origi-nally so unrefined as never to be introed into the aristocratic circle of the

Dame Nature took them in hand not many years ago to see what she could do to improve their habits and with marked success. The elegant Tom Thumb, Pig-my Mexican, Zebra, in stripes of red, orange, pink, scarlet, white, etc.; mosaic, with foliage marbled and dotted green and gold—these were some of the new types introduced, and now we have them dressed in all colors created them dressed in all colors, crested and curled for the ballroom! What next?— Lewiston Journal

entally Knocked Down by a Panther. On the anniversary of Washington's birth Alexander Rawles, a prominent landowner and stockman of Anderson valley, was accidentally knocked down by a large 8-foot panther. Rawles' bruises are now reported serious. His dogs had treed the beast, and Rawles went to a neighbor's for a gun. He could find only one cartridge, but with this he returned and shot the panther, but only slightly wounded it. The animal sprang m its perch midst the dogs and soon stretched one in death. Once in bound-ing backward to avoid the other dogs anther accidentally came in contact

with Rawles, who was knocked down. throughout the fight, giving the dogs its undivided attention, although before and after his fall Rawles vigorously belabored the beast with his gun barrel, which was ruined in the conflict. The enther's death finally resulted. When Rawles was knocked down, his side struck a stone, producing serious inter-nal injuries.—Cor. San Francisco Chron-icle.

Saved by a Quick Hair Cut.

A young woman was saved in an almost "miraculous" manner the other day from almost certain death. She was walking through a mill at Lewis-ton, Me., when her hair fell down in front of a piece of heavy machinery and the ends of the hair caught in some slow-ly revolving cogwheels. The woman acreamed, but did not have the presence of mind to break away at once before more strands of hair were caught and dragged in. She stood there almost mo-tionless screaming, while her head was drawn nearer and nearer to the fatal els. Presently her cries attracted the attention of a man, who rushed to her assistance and severed her hair with a knife just as her head was approaching the wheels.-Exchange.

Practical Doll Show.

The Homosopathic hospital in Blooms-bury, London, will have a very singular exhibit at the great show in Chicago. It is a collection of dolls to illustrate nursing and the advantages of various sur-gical appliances. One doll wears the uniform of a nurse and looks very natty in a dark blue dress and a white apron, cuffs and collar. A collection of little doll invalids is exhibited in tiny beds. They are suffering from broken thighs and other injuries and are fitted with splints and placed in such attitudes as the living patient would be made to assume. It is a novel idea, but a very practical and useful one, and the collection will no doubt attract the attention of the medical fraternity.—Boston Journal.

Macdy's World's Fair Revival Meetings.

The arrangements for a series of evangelical meetings to be conducted by Dwight L. Moody in Chicago during the fair have been completed. The evangelist has surrounded himself with a staff of able Christian workers from every part of this country and Europe, and preparations have been made to hold meetings each night in every part of the city, beginning May 1. Moody's World's Fair Revival Mostings.

Meening Pigeons at the Inauguration.
An interesting incident of the inauguration parade which occurred directly in front of the grand stand was the setting free of a basket of homing pigeons. The birds as soon as liberated circled round and round in the air in front of the president and then taking their bearings flew off to the southwest.

Chased With a Mouthful. Captain Bendire, a well known ornithologist, was riding along the banks of Rillitto creek, Arizona, when he saw a big black hawk He followed the flying bird and at length came up with it, perched on a dead limb of a cottonwood tree. A bulky nest was in a fork of the tree about 40 feet from the ground. The mate of the hawk which the captain had

been following was sitting on the nest. Hoping to secure a trophy. Captain Bendire climbed up to the nest, in which he found a single pale blue egg. The parent birds circled around manifesting their anger at the intrusion by shrill screams, but the captain took the egg He put it in his mouth for safe keeping. as he required both hands in his descent.

Suddenly from his elevated perch he caught sight of several Apache Indians crouched in a small canyon about 80 yards distant They were evidently

He was awake to his danger in an instant, but he manifested no signs of alarm and descended to the ground in a leisurely manner. Had the Indians perceived that they were discovered, they would have been waiting for the egg hunter at the foot of the tree.

As it was the captain reached the ground, mounted his horse and started on a gallop for the camp, five miles dis-

In a moment the Apaches broke cover and pursued. They chased him nearly to the camp, but he reached it in safety, the egg still in his mouth. It was unbroken. Owing to its large size the captain had difficulty in removing it from his mouth without injuring it. His jaws ached for some time afterward. - Youth's

The New and the Beautiful.

That is the most peculiar and as-tounding faculty of the mind that calls the new, the beautiful," said Charles "Now, just think a minute. Look at the change in fashions, and then you see it perfectly. The hat that you wore last season—the one with the stiff rim and soft crown-how nice and nobby it looked then! Now, when you tried on again the other day, accidentally running across it in the locker, why, it looked hideous, didn't it? It's impossible to define why this is so You can't say it is because the mind dislikes old things (some minds don't) nor that all minds love the new, the change. It isn't exactly because persons dislike to be odd or out of date, for some take great delight in looking strange and odd

"Others do not wear the new things first simply to be the first. While I do not think this sense comes from or guides itself by any one of these influences, yet the sum of them all goes to make up a circle of harmony inside of which one would rather dwell than out. There are a thousand little things that the mind comprehends almost unconsciously and acts accordingly. It is this reflex action of brain work that makes it possible for one to understand why we do these things." -St. Louis Globe-Democrat

Why does not a man weigh a pound more immediately after eating a pound weight of food? A little reflection will readily explain this apparent mystery. During the process of mastication, de-glutition, etc., certain muscles are ought into active play, and the exercise of any muscle necessitates a temporary waste of its tissues, and a certain amount of carbon is eliminated and ed off during the course of the meal. This loss, however, is trifling as compared with that due to respiration and erspiration, both of which are increased during the various operations of making

a meal The length of time one may take to consume a pound of food makes but little difference to those losses, for if it is eaten leisurely there is but slight increase of respiration or perspiration, whereas if it is hurried through both are abnormally accelerated. Hence by the time the pound is eaten the consumer has lost appreciably in moisture and car-bonic acid.—Million.

The Evolution of Names. The evolution of names from foreign tongues into English is in many cas easy. From the German Bauer to the English Bowers, and from the French Boulanger to the English Bullinger is but a step, as it were. But there are no people who are oftener more humorously cused of altering their names than the Irish. Thus, Crehan has become Rehan; Carroll, Karl; Dillon, Dyllyn; Divver, Devere and Devyr; McCarty, Macartee and Makart; Slattery, Slater and Satterlee; O'Brien, Obrion and Breen; McGinness, Guinness and Inness; Reilly, Rel-yea; Duffy, Dufay; McGuffin, Magoffin; Quinn, Queen: Fogarty, Fougert: Hag-gerty, Haggart; Sully, Soule. The Eng-lish singer, Braham, merely dropped a letter when he went on the stage. He was a Hebrew, and his real name was Abraham.—Chicago Herald.

The Expansion of Solid Bodies. An ingenious instrument for measuring the expansion of minute solid bodies is found in the list of inventions. The substance is placed in the field of a microscope and an image of it magnified several times is thrown on a screen. This image is further magnified by two micrometer microscopes which accurstely determine the expansion. The substance is heated in a little platinum oven through which an electric current es, and the temperature of the oven is arrived at by observations on the melting of standard substances. By the use of this instrument the thermal expansion of any substance even to the smallest diamond can be determined until the temperature of combustion is reached.—Exchange.

Meeping Up His Reputation.
Wife—I think it's too bad you should throw away money on such expensive umbrellas. You are always losing them.

Why don't you get cheap ones? Husband—Huh! That's all you women know about business. Do you sup-pose I want to advertise the fact that I have a poor memory?—New York Weekly.
